PRODUCT DESCRIPTION

A set of two under-cabinet LED lights, equipped with modern SMD LEDs which, compared to traditional light sources, allow significant energy savings. They are perfect as additional lighting installed under kitchen cabinets or as spot lights to illuminate the countertops during work. They have a built-in, proximity ON / OFF switch that is triggered by a simple hand movement. This solution is especially practical in the kitchen, where our hands are often busy or dirty. These lamps will also work well as a backlight in pieces of furniture, shelves and showcases in the living room or bedroom. These corner lamps operate with rated power of 2W each and

emit light with luminous flux of 180 lm. They shine with a natural white color at a temperature of 4000K.
Material: stainless steel, colour white.
