

## 4-22W Fluorescent starter

Marka: **Virone** | Symbol: **LH-21** | Ean: **5904988907427**

### PRODUCT DESCRIPTION

The starter for 4-22W fluorescent lamps is a small device made of plastic with metal components inside. The starter works on the principle of overcharging the capacitor and triggering the flow of current through the fluorescent lamp.

The 4-22W fluorescent lamp starter is designed for fluorescent lamps from 4 to 22 watts relative power. It is recommended for use in incandescent and halogen lighting installations where fluorescent lamps are used as

an alternative to traditional light sources.

Its use shortens the time it takes for lamps to light up and reduces the effect of light flickering, which significantly improves the quality of lighting and comfort in the room. The ignitor is suitable for installation in lamps illuminating offices and other rooms where continuous lighting is required. It is very easy to install, can be fitted in most lamp holders and is just as easy to replace – just like a standard incandescent bulb.

## TECHNICAL DATA

### General information:

Nominal voltage [V]:	230
Suitable for lamp power [W]:	4-22
Width [mm]:	23
Height/depth [mm]:	42
Other features:	Zakres napięcia dla pojedynczej lampy ~85-265 V/50HZ, zakres napięcia dla serii lamp ~220-250 V/50Hz
