### PRODUCT DESCRIPTION

The LED hand-held flashlight is a device that works not only in workshops, garages, flats or basements, but also during trips, e. g., at the campsites.

It is equipped with two cool 7000K light sources. The panel with SMD diode is the main source of light and offers three lighting modes (high, low, strobe) enabling to adjust the intensity of the light to the user's needs. Additionally, the flashlight is equipped with the side COB panel that not only facilitates to use the torch in a

standing position to illuminate the area around it, but also is energy efficient. The device is operated with the help of on/off button.

The flashlight may be powered in two different ways. The set includes a rechargeable battery, but you may also use regular batteries (3x AA – the batteries not included). When one power source drains, you may switch to another one; therefore, the device works longer and is reliable.

Additionally, it has holes at every side of a handle to easily hang it over the shoulder, or to hang it in desired location. This is a great convenience when you need free hands.

The housing is black-blue and measures 173x85x120mm.
