PRODUCT DESCRIPTION

Floor box for module sockets was designed for indoor installations like offices or conference rooms. Its rectangular shape and grey color make it a perfect and functional fit in a variety of interiors.

The box is intended for four OR-GM-9010 modules freely modified to suit the user's preferences. There may be four 45x45 mm or eight 22,5x45 mm modules placed in the box, or a combination of both.

The frame's height is regulated within the box. This facilitates precise adjustment of, e. g. straight and angle plugs inside the box, as well as facilitates the proper closing of the cover.

The product may be installed inside an access flooring. What is more, you may use a stainless steel OR-GP-9201MB box inside a concrete screed. This solution makes the box universe and durable in various conditions.

The minimum installation depth of 75 mm (adjustable within a range of 35 mm) makes the installation smooth and precise. The adjustment enables to level the socket with the floor.

The box was designed to protect cables and wires. It has two cable entries with protective foam that secures wires from damage. The product is fully safe as the cover of the socket may be closed even when in use.

The product has a cut-out for floor covering or other floor finish. You may place parquet, floor panel, stoneware, terracotta, floorboard or other material up to 8mm thick inside the cover. This makes the box adjustable to different types of flooring.

The housing is made of plastic additionally strengthened with a steel frame; therefore, the socket may withstand a pressure of approximately 550N. The cover is made of steel.

After the cover is closed the ingress protection rate increases from IP20 to IP42. The box is suitable for dry cleaning.

TECHNICAL DATA

General information:

Cover model:	Prostokątny
Number of inlets:	4
Number of device cups:	4
With cable outlet in cover:	tak
Material housing:	Tworzywo sztuczne i stal
Material cover lid:	Stal nierdzewna
Cover load [kN]:	0.55
