

Level control probe

Marka: Orno | Symbol: OR-PZ-490 | Ean: 5908254848056

ORNO

PRODUCT DESCRIPTION

The level control probe is a sensor designed to monitor and regulate liquid levels in closed and open tanks. It is used in a variety of environments, such as water tanks, deep wells and water purification systems.

By integrating the probe with control systems, it is possible to automate the filling, emptying and pumping processes, helping to increase operational efficiency and minimize the need for manual intervention.

Precise sensors built into the unit provide effective control of water levels, preventing both overflows and underflows. In this way, the device supports efficient water treatment, protects the infrastructure and guarantees operational safety.

The probe is made of durable materials such as stainless steel and plastic, which provide resistance to water and other environmental factors.

Dimensions of the probe: Ø26 mm, height 125 mm. White colour.

TECHNICAL DATA

General Information:

| | |
|-------------------------------|-----------------------------------|
| Type of accessory/spare part: | Inne |
| Accessory: | Tak |
| Material: | Stal nierdzewna/Tworzywo sztuczne |
| Colour: | Biały |
| Height [mm]: | 125 |
| Diameter [mm]: | 26 |
