

## Single family video outdoor unit, Full HD, RFID, to expand PAVONIS and PAVONIS MULTI sets

Marka: **Virone** | Symbol: **VDP-67KV** | Ean: **5908254829758**

### PRODUCT DESCRIPTION

PAVONIS equipment stands for aesthetics and confidence in the solutions used. The elegant and aesthetically pleasing panel, made from high-quality materials, is durable, with an IP55 protection level - a choice that will provide peace of mind for years to come.

The outdoor unit is equipped with a high resolution Full HD 1080p camera with a wide viewing angle, so we can record photos or videos in high quality. In addition to this, we can use motion detection and event

logging, and IR LEDs also allow for night vision without blinding the visitor. If, on the other hand, we only want to monitor our surroundings, Pavonis will allow us to do so discreetly, without having to inform our visitors. The device is also carefully manufactured and the use of high-quality materials and elegant design will allow us to enjoy it for a long time even in different weather conditions (IP65).

Set expansion: Extending the set with an additional monitor allows each of them to be used as an intercom. Convenience and ease of installation are ensured, among others, by the number of wires (4) and the power supply for the outdoor unit and the electric strike (max. 300mA) provided from the monitor, which means there is no need for an additional power supply - just a short 2-wire cable from the outdoor unit to the electric strike.

The Pavonis system is also highly expandable (a maximum of 1 additional outdoor unit, 3 monitors and 2 CCTV cameras in addition), so it is ideal for multi-storey houses, villas and larger properties.
